

WHAT IS CLAIMED IS:

1. A weather strip having an extrusion portion, and a molded portion connected to the extrusion portion, the weather strip comprising:

a mounting base portion attachable to an opening portion or a door circumferential edge of a vehicle;

a seal portion that is integrally formed with the mounting base portion and has a hollow portion; and

a slit for taking out a core mold being formed in the mounting base portion of the molded portion when performing molding, wherein:

at least one blocking member, which has an insertion portion to be fitted into the slit, and an engaging projection respectively engaged with the mounting base portion opposed to each other across the slit, for blocking a predetermined zone of the slit by simultaneously clamping and locking the mounting base portion at least in a direction of width thereof.

2. A weather strip according to claim 1, wherein:

the engaging projection is formed in such a way as to project in parallel with the fitting portion; and

a fitting groove, into which an associated engaging projection is fitted, is formed in the mounting base portion.

3. A weather strip according to claim 1, wherein:

the blocking member has a pair of sandwich-holding portions, each of which is integrally formed with an associated one of both end parts of the fitting portion, for sandwich-holding the mounting base portion; and

the engaging projection is integrally formed with at least one of the pair of sandwich-holding portions.

4. A weather strip according to claim 3, wherein:

the engaging projection is formed in the sandwich-holding portion corresponding to a mounting face side of each of the mounting base portion.

5. A weather strip according to claim 1, wherein:

the blocking member has a base portion, which constitutes a part of the mounting base portion at a mounting face side of the mounting base portion, and also has a lock portion locked on an inner surface of the mounting base portion facing the hollow portion; and

the engaging projection is integrally formed with the base portion.

6. A weather strip according to claim 5, wherein:

the blocking member is attached thereto so that the base portion is substantially flush with a mounting face of the mounting base portion.

7. A weather strip according to claim 5, wherein:  
a tapered surface is formed on the lock portion at an end  
side of the blocking member.

8. A weather strip according to claim 1, wherein:  
the fitting portion is formed so that thickness of the  
fitting portion is wider than width of the slit;  
a concave portion, whose depth depends on the thickness  
of the fitting portion, is formed in each of opposed opening  
face portion of the slit at a place at which the fitting portion  
is fitted into the slit.

9. A weather strip according to claim 1, wherein:  
the engaging projections are integrally formed with each  
other like a ring in such a way as to straddle over both the  
mounting base portion facing each other across the slit.
